arXiv - Open-access archive for scholarly articles

Free distribution service and open-access archive for preprints in physics, mathematics, computer science, quantitative biology, quantitative finance, statistics, and more.

Preprint server | Portal login needed to submit

Author guidelines ↗

Submission portal ↗

Website ↗

For the initial submission. These fields and formatting rules are what arXiv asks for when you *first* submit a new manuscript. Revised and accepted manuscripts usually have further requirements (source files, final figures, copyright forms); check the author guidelines when you get there.

16 fields	2/7 required fields filled	0 fields with issues	– checks passed (not run yet)

File uploads

Choose each file the venue takes. Click a box to pick the file, or drop it onto the box.

Manuscript file `manuscript_file`

file **required**

Path to the submission. arXiv prefers a LaTeX source bundle (a .zip or .tar.gz of the .tex, figures, and .bbl); a single PDF is accepted for PDF-only submissions. The file is uploaded, processed, and…

`paper.pdf` 410 KB

Accepted file types: .zip, .tar.gz, .tgz, .tar, .pdf, .tex, .docx, .md

▶ What the author guidelines require 38 rules

Paper Metadata 0 of 5 filled

Copied from the manuscript.

Primary archive `primary_archive`

choice **required**

The top-level arXiv archive your work belongs to. This is the value of the submission form's archive drop-down (#select_arch), so use the archive code (e.g. 'cs' for Computer Science, 'q-bio' for…

Choose…

Primary subject category `primary_category`

text **required**

The specific subject class within the primary archive, as the value of the form's subject-class drop-down (#select_sc). Use the full category code, e.g. 'cs.AI' (Artificial Intelligence), 'q-bio.GN'…

Choose…

Title `title`

text **required**

The full title of the article.

Abstract `abstract`

long text **required**

Plain-text abstract as it should appear on the arXiv abstract page.

0/1920 characters | at most 1920 characters (guidelines) | at least 20 characters

Comments `comments`

long text optional

Optional. Free-text comments shown on the abstract page, conventionally the page/figure count and notes (e.g. '10 pages, 4 figures; submitted to JOSS').

Authors 0 of 1 filled

Authors `authors`

authors **required**

One author per line, in order. Format: Name. The arXiv metadata form has a single *Author(s) box that takes a comma-separated list of names, so a name is all that is recorded -- no emails,…

Disclosures 2 of 9 filled

Policies and questions only you can answer, where the venue accepts more than one answer. paperpush never fills these in for you.

Cross-list archives `crosslist_archives`

multiple choice optional

Optional. Additional top-level archives to cross-list the paper under, comma-separated (e.g. 'cs, stat'). Same archive codes as primary_archive, with no limit on how many. Each entry is paired…

at least 0 items

Cross-list categories `crosslist_categories`

multiple choice optional

Optional. Additional subject categories to cross-list the paper under, comma-separated (e.g. 'cs.LG, stat.ML'). Same category codes as primary_category, with no limit on how many. Each entry is…

Add a category…

at least 0 items

License `license`

choice **required**

Distribution license for the submission. The arXiv perpetual, non-exclusive license is the minimum arXiv requires; the Creative Commons options grant broader reuse. The runner selects the matching…

arXiv.org perpetual, non-exclusive license 1.0

Keep all uploaded files `keep_all_files`

yes / no optional

Only applies to LaTeX source submissions (.tex/.zip). Set to yes to keep every file in the uploaded bundle, including any arXiv's processor flags as removable (e.g. a bundled .pdf or auxiliary…

(●) Yes ( ) No

Report number `report_number`

text optional

Optional. Author-assigned report or preprint number, if any.

Journal reference `journal_reference`

text optional

Optional. Full bibliographic reference once the article has been published in a journal.

ACM classification `acm_class`

text optional

Optional. ACM Computing Classification System code(s), semicolon-separated (e.g. 'F.2.2; I.2.7'). Relevant mainly for cs submissions.

MSC classification `msc_class`

text optional

Optional. Mathematics Subject Classification code(s), comma-separated (e.g. '14J60, 14F05'). Relevant mainly for math submissions.

DOI `doi`

text optional

Optional. DOI of a published version of this article, if one exists.

▾ Checks

✔ passed ✖ failed ▲ warning ○ not checked yet

Checked as you type 3 of 4 passed

The form itself: required fields, options, counts, and the word, character, and keyword limits.

✔ Field values have the right type and known field ids *Submission form*

✖ Required fields are filled and confirmations given *Submission form*

- Primary archive: Primary archive is required but empty
- Primary subject category: Primary subject category is required but empty
- Title: Title is required but empty
- Authors: Authors is required but empty
- Abstract: Abstract is required but empty

✔ Choices are valid options *Submission form*

✔ Title, abstract, and keywords within the guidelines' limits *Guidelines*

▶ 5 checks not applicable

Checked by Validate 40 checks

These read your uploaded files: formats and sizes, page and word counts, sections, statements, figures, layout, links, references, and whether the form matches the manuscript.

○ Upload files exist and have accepted types and sizes	*Files*
○ Combined upload size within the portal's limit	*Files*
○ Links cited in the files and URL fields are reachable	*Integrity*
○ Reference DOIs match the works they cite	*Integrity*
○ No cited work has been retracted	*Integrity*
○ References without a DOI match a registered work	*Integrity*
○ References cite the journal article, or the latest preprint	*Integrity*
○ No secrets or private information in the files	*Integrity*
○ No hidden text or prompts aimed at AI reviewers	*Integrity*
○ Figures meet the minimum resolution (dpi)	*Figures*
○ Figure lettering within the guidelines' size range	*Figures*
○ Figure lettering uses one typeface across the figures	*Figures*
○ Figure panels labeled in the required style (e.g., a, b, c)	*Figures*
○ Figure colours distinguishable with red-green colour blindness	*Figures*
○ Figures do not use a plotting tool's default colors	*Figures*

○ Figures placed where the guidelines ask	*Figures*
○ Cross-references resolve (no “??”)	*Citations*
○ No two figures or tables share a caption or a number	*Citations*
○ Every figure and table has a caption	*Citations*
○ Main figures cited in order	*Citations*
○ Main tables cited in order	*Citations*
○ Abstract cites no references	*Abstract and front matter*
○ Manuscript gives a contact e-mail address	*Abstract and front matter*
○ Keywords given in the .sub or the manuscript	*Abstract and front matter*
○ Every reference is cited, and every citation has a reference	*References*
○ BibTeX entries are complete, closed, and have unique keys, and no work is listed twice	*References*
○ Reference list is alphabetical or follows first citation	*Manuscript details*
○ No placeholders, to-do notes, comments, or highlighting left in the files	*Manuscript details*
○ Share of references more than 10 years old	*References*
○ Citation density (citations per 1,000 words), reported for information	*References*
○ No double spaces between words	*Prose*
○ No accidentally doubled words (e.g., 'the the')	*Prose*
○ Spacing around punctuation	*Prose*
○ Brackets and quotes pair up	*Prose*
○ Common misspellings (codespell)	*Prose*
○ Varied word choice (no heavily repeated adjectives or adverbs)	*Prose*
○ Numbers of 10 or more in digits, thousands grouped one way	*Prose*
○ Abbreviations and compounds written one way (i.e., e.g., et al., vs., Fig.)	*Prose*
○ Acronyms spelled out at first use	*Prose*
○ Code behind the analysis is public, archived, licensed, and declares its environment	*Rigor and reproducibility*

▶ 61 checks not applicable

Checked only with AI 19 checks

Judgements that need someone to read the files: lettering in raster figures, free-text guideline rules, whether every field says what the manuscript says. Run them with “Validate, extended with AI”.

○ Each figure and panel shows what its legend and the text say	*Figures*
○ Figure design: axis labels and units, ticks and scale bars, axis limits, chart type, consistent color meaning	*Figures*
○ Ethics approval and consent	*Manuscript details*
○ Required declarations (conflicts, data, contributions, funding) present and in the right place	*Manuscript details*
○ Title page lists authors, affiliations, corresponding author, and contact emails	*Manuscript details*
○ Abstract has the required form and subheadings (plus PRISMA/CONSORT items for reviews and trials)	*Manuscript details*
○ Every mention of supplementary material has a matching uploaded item	*Manuscript details*
○ Trademarked product names and ™/® symbols flagged	*Manuscript details*
○ Content is in the section it belongs to	*Manuscript details*
○ Section headings match the text under them	*Manuscript details*
○ NIH funding statements give grant numbers	*Manuscript details*
○ Spelling, grammar, and tense (read by AI)	*Prose*
○ A clinical trial gives its own registration number	*Rigor and reproducibility*
○ Follows the reporting guideline for its study design (PRISMA for systematic reviews, CONSORT for trials, ...)	*Rigor and reproducibility*
○ Each figure panel is traced to the code and public data that draw it	*Rigor and reproducibility*
○ Follows the guidelines' other general rules (not checked automatically)	*Guidelines*
○ Follows the guidelines' other manuscript rules (not checked automatically)	*Guidelines*
○ Follows the guidelines' other abstract rules (not checked automatically)	*Guidelines*
○ Follows the guidelines' other figure rules (not checked automatically)	*Guidelines*
